Operating System Navigation Checklist

Student Name: Kassidy Simmons

Date: *10/31/2026*

Instructions

Navigate to each Windows feature listed below and take a screenshot showing the feature open.

Save all screenshots and upload them to your Week 3 GitHub folder.

Required Tasks

☐ Open Windows Settings

☐ Open File Explorer

☐ Open System Information

☐ Open Device Manager

☐ Open Task Manager

Screenshot Verification

Screenshot 1: Windows Settings

(Yes) Completed

File Name: WindowsSettingsSC.PNG

Screenshot 2: File Explorer

(Yes) Completed

File Name: FileExplorerSC.PNG

Screenshot 3: System Information

(Yes) Completed

File Name: SystemInformationSC.PNG

Screenshot 4: Device Manager

(Yes) Completed

File Name: DeviceManagerSC.PNG

Screenshot 5: Task Manager

(Yes) Completed

File Name: TaskManagerSC.PNG

Reflection

Briefly describe what areas of Windows you accessed during this activity.

Windows Settings - In Windows settings I opened Settings to explore the various configuration options and settings categories available within the operating system. During this activity, I reviewed system information, checked for available Windows updates, and navigated through different settings to familiarize myself with the system's configuration capabilities. I also accessed information necessary to complete additional worksheets. After reviewing the available options, I confirmed that my system was up to date. No changes were made to the existing system configuration.

Task Manager - In task manager I opened Task Manager to view running applications, background processes, and system performance information, including CPU, memory, and disk usage. This tool allowed me to monitor how my computer uses its resources and identify applications that may be affecting system performance. I captured a screenshot for documentation. No changes were made.

File Explorer - In File Explorer I opened File Explorer to navigate through the computer's file system and explore the folders and directories available within Windows. During this activity, I reviewed several system directories, including the PerfLogs folder, to examine performance-related files and familiarize myself with how Windows organizes and stores system information. I also reviewed the programs installed on my computer and used the appropriate system management tools to uninstall unnecessary applications, including Camo Studio and other unwanted programs. This process helped me become more familiar with the organization of the Windows file system while also performing general maintenance to reduce unnecessary software and improve system organization.

System information -
For System information I opened The System Information settings to review the technical specifications and general system details available on my computer. During this activity, I examined the system summary, which provides an overview of the operating system, hardware components, and device configuration. I reviewed the information available within this utility to familiarize myself with how Windows organizes and displays technical information about the computer. This process allowed me to better understand where important system specifications can be located and how this information can be referenced for hardware identification, troubleshooting, and system compatibility purposes. No changes were made to the existing system configuration.

Device manager -
I opened Device Manager to review the hardware components and device management settings available within Windows. During this activity, I viewed the different hardware categories and the configuration options associated with the devices recognized by the operating system. I primarily focused on observing the available device settings and familiarizing myself with how Windows organizes and displays hardware information. This process allowed me to better understand how Device Manager can be utilized to identify installed hardware, access device properties, and troubleshoot potential hardware or driver-related issues. No modifications were made to the existing device configurations.
