Week 4 Capstone — Server Summary

Server Name: Kassidy Server 2026
Created: November 2, 2026
Platform: Pluralsight Cloud Servers (Amazon EC2)
Instance Type: t3a.xlarge
Expiration Date Recorded: November 24, 2026
Server Status: Successfully deployed and operational

Server Specifications

- **Operating System:** Windows Server 2025 Datacenter, Version 24H2
- **OS Build:** 26100.32995
- **Processor:** AMD EPYC 7571, 2.20 GHz
- **CPU Allocation:** 4 virtual processors
- **Memory:** 16 GB RAM
- **Storage:** 54 GB total across three virtual disks (50 GB, 2 GB, 2 GB)
- **Network:** Amazon Elastic Network Adapter
- **Private IP:** 172.31.123.65
- **Windows Hostname:** EC2AMAZ-H4SKJLP
- **System Architecture:** 64-bit

Server Records

- **Record 1:** 01384445491c.mylabserver.com
- **Record 2:** 01384445491d.mylabserver.com

Work Completed

I successfully created and configured my Pluralsight Windows Server environment, accessed it using Remote Desktop, and verified its operating system, processor, memory, storage, and network settings.

I resolved an initial server startup error by stopping and restarting the server. I also collected screenshots documenting the server's configuration and organized my coursework evidence for GitHub.

Maintenance

I located and restarted my existing server, checked its expiration date, backed up my coursework documentation, and stopped the server when finished.

Overall Progress

The server deployment and hardware verification are complete. Remaining work includes confirming all GitHub uploads and submitting the required capstone documentation.
